ProPoint™ Data Injector Box

The ProPoint Data Injector Box is used in conjunction with select products from the ProPoint family of luminaires. The Data Injector receives power from line voltage, and data from a DMX512 controller, and feeds the power/data to the luminaire through one cable, allowing for a simple plug and play installation.

Product Specifications

Model	ProPoint Data Injector Box
Power Input¹	AC Line - 100-277V _{ac} 50/60 Hz
Data Input/Output	DMX512 + RDM
Power/Data Output	AC + Data
Power Consumption	2.5W
Current Rating	15A max.
Housing	Die Cast Aluminum
Size	160 x 125 x 55.5mm (6.3" x 5" x 2.2")
Weight	1.4 kgs (3.09 lbs.)
Regulatory/Product Certifications	cETLus, CE, FCC, RoHS, ASTM B117-16, ANSI 3G, IK08
Operating Temperature	-30°C to +55°C (-22°F to +131°F)
Storage Temperature	-40°C to +80°C (-40°F to +176°F)
Environment	IP66 Outdoor, suitable for coastal environments
Humidity	85%, non-condensing

Connector Specifications

Power In	3-pin male connector
Data Out	RJ45
Power/Data Out	6-pin female connector

1. Auto-switching. Single phase (line, neutral and ground).

LED CHARACTERISTICS: Because LEDs are semiconductor devices, their performances are subject to inherent variability commonly found in semiconductor industry. To improve consistency in performance across the same product, LED manufacturers "sort" LEDs into bins according to different preset parameters, such as forward driving voltage, illumination, etc. Whereas binning is a sorting function, it is not a correction process. Inherent variability in the manufacturing process always results in different binning distributions according to different production lots. Traxon uses automatically binned LEDs on its products, thereby minimizing output variations within the model range.

As with all electronic devices, LED output degrades over time – a term called lumen depreciation. This also explains why it is nearly impossible to expect photometric performances of two LED products with different service life spans to be the same. The rate of LED degrade is a complicated function involving many factors, such as operating efficiency, duration of continuous operation and, more significantly, environmental conditions (ambient temperature for example). If allowed, working under optimal operating temperature range and with good ventilation, LED devices enjoy long service lives over conventional light sources. When using/installing LED devices, care should be taken to ensure that the devices will operate within the operating conditions specified in respective product literature.

Lumen measurement complies with LM-79-08 standard.
Lumen maintenance is calculated based on LM-80 compliant measurement.
